

— Problem, Market & Why Now

PROBLEM STATEMENT

Restaurant managers operate in a highly fragmented environment. They must manage staff scheduling, HR, operations, incidents, onboarding, and reporting using multiple disconnected tools or manual processes.

- 3–5 hrs/week on manual coordination
- High staff turnover → constant onboarding
- Lack of visibility → labor cost inefficiencies
- Restaurants react instead of manage proactively

BEACHHEAD MARKET (ICP)

Independent & small restaurant groups with **10+ employees**, operating on paper or with fragmented solutions. **Buyer:** Owner / Manager / Ops Manager. They struggle with scheduling, accountability, task management, payroll prep, incident reporting.

WHY NOW

Restaurant crisis: High turnover, seasonal activity, lower margins

Digital transformation: POS adopted, ops still manual; Covid accelerated digitization

AI enables insights: Detect operational patterns & uncover insights. Optimize staff allocation & reduce inefficiencies

TAM / SAM / SOM

ARPU: €100/mo (€1,200/yr). Geographies: US, Europe, MENA, Morocco. Sources: Statista, IBISWorld, Grand View Research.

Metric	Restaurants	Market Value
TAM	~2.5M	€3.0B
SAM	~1.0M	€1.2B
SOM	~60,800	\$72.96M

TAM: US + Europe + MENA + Morocco. SAM: independent/small groups, 10+ employees. Target: 1% of SAM. Market growth: 16% CAGR.

MANDATORY CLARITY SENTENCE

Mizan is an AI-powered operational platform designed to centralize the management of restaurant operations. It brings together team coordination, operational workflows, and business data into a single environment, while connecting with existing systems such as POS and reservation platforms into one unified hub.

We are targeting restaurants across the US, Europe and MENA (starting with Morocco) - a TAM of ~€3B (2.5M restaurants) and SAM of ~€1.2B (1M independent/small groups with 10+ employees). The restaurant management software market grows at ~16% annually. Mizan aims to capture 1% of SAM (~\$72.96M ARR).

— Solution & Why It Wins

SOLUTION

Mizan is an AI-powered operational platform that centralizes restaurant management. It brings together team coordination, operational workflows, and business data into a single environment, connecting with POS and reservation platforms. Managers oversee operations, coordinate teams, and make decisions from one unified hub.

CORE UNIQUE VALUE DRIVERS

AI Assistant: Supports managers in daily decisions, task assignments, team coordination

Operational Control Layer: Unifies workflows, connects existing tools

Frictionless Staff: WhatsApp integration — tasks, updates, voice notes

API Connectivity: Seamless POS, reservation, restaurant software integrations

Execution-Focused: Manages daily operations, tasks, processes, coordination

INITIAL VALIDATION

LOIs from 6 restaurants

Willing to test the solution

DEMO & ROADMAP

Demo video available at [/mizan_ad.mp4](#)

— Competition & Defensibility

HOW PROBLEM IS SOLVED TODAY

Fragmented stack: scheduling tools, dozens of WhatsApp groups, spreadsheets/paper checklists, reservation platforms, physical attendance devices, POS reports. Systems operate in silos, forcing manual consolidation.

COMPETITORS

7Shifts (~\$70M/yr) — scheduling, labor

Jolt — checklists, audits, incidents, food safety

Zavo (YC25) — POS, payments, agents for reservation & marketing

Blent AI (660k/yr) — hospitality data intelligence platform

5-Out (~\$1M–\$3M/yr) — all-in-one: incidents, data, ops, POS, AI

WHY MIZAN WINS TODAY

Operational hub: Centralizes ops vs isolated solutions

AI assistance: Professional know-how, tasks, inefficiencies

Frictionless adoption: WhatsApp, voice notes

Open integrations: Plugs into POS/reservations vs replacing

DEFENSIBILITY (5–10 YEARS)

Operational data layer: Workflows, staffing, performance

Integration ecosystem: By becoming the operational layer connecting POS, reservations and staff tools, Mizan becomes the single source of truth for restaurants

AI loop (Stickiness): More restaurants → more data → better AI Analytics → stronger differentiation

DEFENSIBILITY MOAT

Deep connection to Moroccan restaurant ecosystem → direct access to owners/operators, efficient acquisition. Performance comes from operational execution, not from the most advanced POS. Mizan is built around this core belief.

Moats: Technology, distribution, data.
